Do you want to clean all the floor only by using your phone?

The robot cleaner is a gadget that cleans all the floor of the house dodging obstacles and recognizing the room and doing it in a little time.

The big advantage is that you can connect with the smartphone and do a lot of things like watch where the robot cleaned, how time he cleaned, where do you want the robot to clean next time and more things. The aplicacion is the best feature

Unfortunately, one of the disadvantage is that the robot need some maintenance, so sometimes you need to empty the dust deposit and also you need to clean the sensors and cut the hair that tangles to the motors

But on the whole this maintenance is worth it because is very useful to clean your house, so i recommend totally this gadget to people that don't want to lose time cleaning the floor and people who can't clean the floor or people that have money saved and want to buy something useful and also its not so expensive
